Chapter 1

SHE(Secure Hardware Extension) API

This document is a software reference description of the API provided by the Secure Enclave Library on i.MX8DXL and i.MX95 platforms for SHE solutions

Chapter 2

Revision History

Revision	date	description
0.1	Jan 13 2024	Initial Draft

Chapter 3

General concepts related to the API

3.1 Session

The API must be initialized by a potential requestor by opening a session. The session establishes a route (MU, DomainID...) between the requester and the SHE. When a session is opened, the SHE returns a handle identifying the session to the requester.

3.2 Service flow

For a given category of services which require service handle, the requestor is expected to open a service flow by invoking the appropriate SHE API. The session handle, as well as the control data needed for the service flow, are provided as parameters of the call. Upon reception of the open request, the SHE allocates a context in which the session handle, as well as the provided control parameters are stored and return a handle identifying the service flow.

The context is preserved until the service flow, or the session, are closed by the user and it is used by the SHE to proceed with the sub-sequent operations requested by the user on the service flow.

3.3 Key store

A key store can be created by specifying the CREATE flag in the `she_open_key_store_service` API. Please note that the created key store will be not stored in the NVM till a key is generated or imported specifying the "STRICT OPERATION" flag.

3.4 Implementation specificities

SHE API with common features are supported on i.MX8DXL and i.MX95. The details of supported features per chip will be listed in the platform specificities.

Chapter 4

Module Index

4.1 Modules

Here is a list of all modules:

SHE Get Info	24
SHE Commands	26
CMD_ENC_CBC / CMD_DEC_CBC and CMD_ENC_ECB / CMD_DEC_ECB	9
CMD_EXPORT_RAM_KEY	14
FAST_MAC	16
CMD_GENERATE_MAC	18
CMD_VERIFY_MAC	20
CMD_GET_ID	22
CMD_GET_STATUS	27
CMD_LOAD_KEY	39
CMD_LOAD_PLAIN_KEY	42
CMD_INIT_RNG	44
CMD_RND	46
CMD_EXTEND_SEED	48
last rating code	56
CMD_CANCEL	57
Session	29
SHE keys	34
SHE+ key extension	35
Key store	36
Shared Buffer	50
Error codes	51
Utils	54
Global Info	58

Chapter 5

Module Documentation

5.1 CMD_ENC_CBC / CMD_DEC_CBC and CMD_ENC_ECB / CMD_DEC_ECB

Data Structures

- struct [open_svc_cipher_args_t](#)
- struct [op_cipher_one_go_args_t](#)

Macros

- #define [SHE_CIPHER_ONE_GO_ALGO_AES_ECB](#) (([she_op_cipher_one_go_algo_t](#))(0x00u))
Indicates it is AES ECB Cipher operation.
- #define [SHE_CIPHER_ONE_GO_ALGO_AES_CBC](#) (([she_op_cipher_one_go_algo_t](#))(0x01u))
Indicates it is AES CBC Cipher operation.
- #define [SHE_CIPHER_ONE_GO_FLAGS_DECRYPT](#) (([she_op_cipher_one_go_flags_t](#))(0u << 0))
Bit indicating the decrypt operation.
- #define [SHE_CIPHER_ONE_GO_FLAGS_ENCRYPT](#) (([she_op_cipher_one_go_flags_t](#))(1u << 0))
Bit indicating the encrypt operation.

Typedefs

- typedef uint8_t [she_op_cipher_one_go_algo_t](#)
Bit field indicating the requested cipher operations.
- typedef uint8_t [she_op_cipher_one_go_flags_t](#)
Bit field indicating the requested encrypt/decrypt operations.

Functions

- [she_err_t she_open_cipher_service](#) ([she_hdl_t](#) session_hdl, [open_svc_cipher_args_t](#) *args)
- [she_err_t she_close_cipher_service](#) ([she_hdl_t](#) cipher_handle)
- [she_err_t she_cipher_one_go](#) ([she_hdl_t](#) cipher_handle, [op_cipher_one_go_args_t](#) *args)

5.1.1 Detailed Description

SHE supports two modes electronic cipher book mode (ECB) for processing single blocks of data and the cipher block chaining mode (CBC) for processing larger amounts of data.

5.1.2 Data Structure Documentation

5.1.2.1 struct open_svc_cipher_args_t

Structure describing the open cipher service members

Data Fields

uint32_t	cipher_hdl	handle identifying the cipher service flow
uint8_t	flags	bitmap specifying the services properties
uint8_t	reserved[3]	reserved bits

5.1.2.2 struct op_cipher_one_go_args_t

Structure describing the cipher one go operation arguments

Data Fields

uint32_t	key_identifier	identifier of the key to be used for the operation
uint8_t *	iv	pointer to the initialization vector (nonce in case of AES CCM)
uint16_t	iv_size	length in bytes of the initialization vector. it must be 0 for algorithms not using the initialization vector. It must be 12 for AES in CCM mode (not valid for SHE)
uint8_t	svc_flags	bitmap specifying the services properties.
uint8_t	flags	bitmap specifying the operation attributes
uint8_t	cipher_algo	algorithm to be used for the operation
uint8_t *	input	pointer to the input area: <ul style="list-style-type: none"> plaintext for encryption ciphertext for decryption Note: In case of CCM it is the purported ciphertext.
uint8_t *	output	pointer to the output area: <ul style="list-style-type: none"> ciphertext for encryption Note: In case of CCM it is the output of the generation-encryption process. plaintext for decryption
uint32_t	input_size	length in bytes of the input. <ul style="list-style-type: none"> In case of CBC and ECB, the input size should be multiple of a block cipher size (16 bytes).
uint32_t	output_size	length in bytes of the output

5.1.3 Function Documentation

5.1.3.1 she_open_cipher_service()

```
she_err_t she_open_cipher_service (
    she_hdl_t session_hdl,
    open_svc_cipher_args_t * args )
```

Open a cipher service flow. User can call this function only after having opened a key-store service flow. User must open this service in order to perform cipher operation.

Parameters

<i>session_hdl</i>	handle identifying the SHE session.
<i>args</i>	pointer to the structure containing the function arguments.

Returns

error code.

5.1.3.2 she_close_cipher_service()

```
she_err_t she_close_cipher_service (
    she_hdl_t cipher_handle )
```

Terminate a previously opened cipher service flow

Parameters

<i>cipher_handle</i>	handle identifying the Cipher service.
----------------------	--

Returns

error code.

5.1.3.3 she_cipher_one_go()

```
she_err_t she_cipher_one_go (
    she_hdl_t cipher_handle,
    op_cipher_one_go_args_t * args )
```

Perform ciphering operation i.e.

CBC encryption/decryption and ECB encryption/decryption of a given plaintext/ciphertext with the key identified by `key_id`.

User can call this function only after having opened a cipher service flow

Parameters

<i>cipher_handle</i>	handle identifying the cipher service.
<i>args</i>	pointer to the structure containing the function arguments.

Returns

error code

5.2 CMD_EXPORT_RAM_KEY

Data Structures

- struct [op_export_plain_key_args_t](#)

Functions

- [she_err_t she_export_plain_key](#) ([she_hdl_t](#) utils_handle, [op_export_plain_key_args_t](#) *args)

5.2.1 Detailed Description

The function exports the RAM_KEY into a format protected by SECRET_KEY. The key can be imported again by using CMD_LOAD_KEY. A RAM_KEY can only be exported if it was written into SHE in plaintext

5.2.2 Data Structure Documentation

5.2.2.1 struct op_export_plain_key_args_t

Structure describing the export RAM key operation arguments

Data Fields

uint8_t *	m1	pointer to the output address for M1 message
uint8_t	m1_size	size of M1 message - 128 bits
uint8_t *	m2	pointer to the output address for M2 message
uint8_t	m2_size	size of M2 message - 256 bits
uint8_t *	m3	pointer to the output address for M3 message
uint8_t	m3_size	size of M3 message - 128 bits
uint8_t *	m4	pointer to the output address for M4 message
uint8_t	m4_size	size of M4 message - 256 bits
uint8_t *	m5	pointer to the output address for M5 message
uint8_t	m5_size	size of M5 message - 128 bits

5.2.3 Function Documentation

5.2.3.1 she_export_plain_key()

```
she_err_t she_export_plain_key (
    she_hdl_t utils_handle,
    op_export_plain_key_args_t * args )
```

exports the RAM_KEY into a format protected by SECRET_KEY.

Parameters

<i>utils_handle</i>	handle identifying the SHE utils service.
<i>args</i>	pointer to the structure containing the function arguments.

Returns

error code

5.3 FAST_MAC

Data Structures

- struct [op_fast_mac_mubuff_t](#)
- struct [op_fast_v2x_mac_t](#)

Macros

- #define [SHE_FAST_MAC_FLAGS_GENERATION](#) 0
Flag to generate MAC.
- #define [SHE_FAST_MAC_FLAGS_VERIFICATION](#) 1
Flag to verify MAC.
- #define [SHE_FAST_MAC_FLAGS_VERIF_BIT_LEN](#) 2
Flag to verify variable length MAC.

5.3.1 Detailed Description

Data description of structures shared with SAB layer, we take same structure from user for SECO and V2X to ease their implementation and differentiate them further in code.

5.3.2 Data Structure Documentation

5.3.2.1 struct op_fast_mac_mubuff_t

Structure describing the FAST MAC generation/verification operation arguments for SECO

Data Fields

uint16_t	key_id	identifier of the key to be used for the operation
uint16_t	data_length	length in bytes of the input message. The message is padded to be a multiple of 128 bits by SHE
uint16_t	data_offset	Offset of the Input data in the SECURE RAM.
uint8_t	mac_length	MAC length in bytes, only valid in case of MAC verification.
uint8_t	flags	flag to identify the operation(generate/verify)
uint32_t	verification_status	result of the MAC comparison

5.3.2.2 struct op_fast_v2x_mac_t

Structure describing the FAST MAC generation/verification operation arguments for V2X

Data Fields

uint16_t	key_id	identifier of the key to be used for the operation
uint16_t	data_length	length in bytes of the input message. The message is padded to be a multiple of 128 bits by SHE

Data Fields

uint16_t	rsrv	reserved
uint8_t	mac_length	MAC length expressed in bits, only valid in case of MAC verification. Accepted values are: Zero: the MAC length value used will be the nominal length (128bit). Greater or equal than the minimum value defined in the key store.
uint8_t	flags	flag to identify the operation(generate/verify)
uint32_t	m1	first 4 bytes of the message to be use for MAC generation/verification
uint32_t	m2	2nd next 4 bytes of the message to be use for MAC generation/verification
uint32_t	m3	3rd next 4 bytes of the message to be use for MAC generation/verification
uint32_t	m4	4th next 4 bytes of the message to be use for MAC generation/verification
uint32_t	verification_status	result of the MAC comparison <ul style="list-style-type: none">• 0x5A3CC3A5 - verification success• 0 - verification fail

5.4 CMD_GENERATE_MAC

Data Structures

- struct [op_generate_mac_t](#)

Macros

- #define [SHE_MAC_SIZE](#) 16u
size of the MAC generated is 128bits.
- #define [SHE_MESSAGE_OFFSET](#) 16u
message is always kept at offset 16 for FAST MAC V2 API.

Functions

- [she_err_t she_generate_mac](#) ([she_hdl_t](#) utils_handle, [op_generate_mac_t](#) *args)
- [she_err_t she_generate_fast_mac_mubuff_v2](#) ([she_hdl_t](#) utils_handle, [op_generate_mac_t](#) *args)

5.4.1 Detailed Description

SHE supports two types of functions to generate MAC. 1: for 16 bytes message 2: V2-for 16 or greater than 16 bytes message.

5.4.2 Data Structure Documentation

5.4.2.1 struct op_generate_mac_t

Structure describing the FAST MAC generation operation arguments

Data Fields

uint16_t	key_ext	identifier of the key extension to be used for the operation
uint16_t	key_id	identifier of the key to be used for the operation
uint16_t	message_length	length in bytes of the input message. The message is padded to be a multiple of 128 bits by SHE
uint8_t *	message	pointer to the message to be processed
uint8_t *	mac	pointer to where the output MAC should be written (128bits should be allocated there)

5.4.3 Function Documentation

5.4.3.1 she_generate_mac()

```
she_err_t she_generate_mac (
    she_hdl_t utils_handle,
    op_generate_mac_t * args )
```

Generates a MAC of a given message with the help of a key identified by key_id.

Parameters

<i>utils_handle</i>	handle identifying the utils service.
<i>args</i>	pointer to the structure containing the function arguments.

Returns

error code

5.4.3.2 she_generate_fast_mac_mubuff_v2()

```
she_err_t she_generate_fast_mac_mubuff_v2 (
    she_hdl_t utils_handle,
    op_generate_mac_t * args )
```

Generates a MAC (V2) of a given message (supports length greater than 16 bytes) with the help of a key identified by key_id.

Parameters

<i>utils_handle</i>	handle identifying the utils service.
<i>args</i>	pointer to the structure containing the function arguments.

Returns

error code

5.5 CMD_VERIFY_MAC

Data Structures

- struct [op_verify_mac_t](#)

Macros

- `#define SHE_FAST_MAC_VERIFICATION_STATUS_OK 0x5a3cc3a5`
verification status of MAC
- `#define MAC_BYTES_LENGTH 0`
MAC length expressed in bytes.
- `#define MAC_BITS_LENGTH 1`
MAC length expressed in bits.
- `#define SHE_MAC_VERIFICATION_SUCCESS 0`
indication of mac verification success
- `#define SHE_MAC_VERIFICATION_FAILED 1`
indication of mac verification failure

Functions

- [she_err_t she_verify_mac](#) ([she_hdl_t](#) utils_handle, [op_verify_mac_t](#) *args)
- [she_err_t she_verify_fast_mac_mubuff_v2](#) ([she_hdl_t](#) utils_handle, [op_verify_mac_t](#) *args)

5.5.1 Detailed Description

SHE supports two types of functions to verify MAC. 1: for 16 bytes message 2: V2-for 16 or greater than 16 bytes message.

5.5.2 Data Structure Documentation

5.5.2.1 struct op_verify_mac_t

Structure describing the FAST MAC generation operation arguments

Data Fields

uint16_t	key_ext	identifier of the key extension to be used for the operation
uint16_t	key_id	identifier of the key to be used for the operation
uint16_t	message_length	length in bytes of the input message. The message is padded to be a multiple of 128 bits by SHE
uint8_t *	message	pointer to the message to be processed
uint8_t *	mac	pointer to the MAC to be compared
uint8_t	mac_length	number of MAC bytes to be compared with the expected value. It cannot be lower than 4 bytes.
uint32_t	verification_status	result of the MAC comparison
uint8_t	mac_length_encoding	mac length expressed in bytes or bits

5.5.3 Function Documentation

5.5.3.1 she_verify_mac()

```
she_err_t she_verify_mac (
    she_hdl_t utils_handle,
    op_verify_mac_t * args )
```

Verify the MAC of a given message with the help of a key identified by key_id.

Parameters

<i>utils_handle</i>	handle identifying the utils service.
<i>args</i>	pointer to the structure containing the function arguments.

Returns

error code

5.5.3.2 she_verify_fast_mac_mubuff_v2()

```
she_err_t she_verify_fast_mac_mubuff_v2 (
    she_hdl_t utils_handle,
    op_verify_mac_t * args )
```

Verify the MAC (V2) of a given message (supports message length greater than 16 bytes) with the help of a key identified by key_id.

Parameters

<i>utils_handle</i>	handle identifying the utils service.
<i>args</i>	pointer to the structure containing the function arguments.

Returns

error code

5.6 CMD_GET_ID

Data Structures

- struct [op_get_id_args_t](#)

Macros

- #define [SHE_CHALLENGE_SIZE](#) 16u
size of the input challenge vector is 128 bits.
- #define [SHE_ID_SIZE](#) 15u
size of the Identity(ID) returned is 120 bits.
- #define [SHE_MAC_SIZE](#) 16u
size of the computed MAC is 128 bits.

Functions

- [she_err_t she_get_id](#) ([she_hdl_t](#) utils_handle, [op_get_id_args_t](#) *args)

5.6.1 Detailed Description

Status register can be read using below command, its an 8 bit register and has very useful information (more bit description, please refer SHE specification)

5.6.2 Data Structure Documentation

5.6.2.1 struct op_get_id_args_t

Structure describing the GET ID operation arguments

Data Fields

uint8_t	challenge[SHE_CHALLENGE_SIZE]	input Challenge vector
uint8_t	id[SHE_ID_SIZE]	identity (UID) returned by the command
uint8_t	sreg	status register returned by the command
uint8_t	mac[SHE_MAC_SIZE]	MAC returned by the command.

5.6.3 Function Documentation

5.6.3.1 she_get_id()

```
she_err_t she_get_id (
    she_hdl_t utils_handle,
```

```
op_get_id_args_t * args )
```

This function returns the identity (UID) and the value of the status register protected by a MAC over a challenge and the data. User can call this function only after opening the utility service.

Parameters

<i>utils_handle</i>	handle identifying the utils service.
<i>args</i>	pointer to the structure containing the function arguments.

Returns

error code

5.7 SHE Get Info

Get miscellaneous information.

Data Structures

- struct [op_get_info_args_t](#)

Functions

- [she_err_t she_get_info](#) ([she_hdl_t](#) session_hdl, [op_get_info_args_t](#) *args)

5.7.1 Detailed Description

Get miscellaneous information.

This function return, among others, all the information needed to build a valid signed message.

5.7.2 Data Structure Documentation

5.7.2.1 struct op_get_info_args_t

Structure describing the get info operation member arguments

Data Fields

uint32_t	user_sab_id	Stores User identifier (32bits)
uint8_t *	chip_unique_id	Stores the chip unique identifier.
uint16_t	chip_unq_id_sz	Size of the chip unique identifier in bytes.
uint16_t	chip_monotonic_counter	Stores the chip monotonic counter value (16bits)
uint16_t	chip_life_cycle	Stores the chip current life cycle bitfield (16bits)
uint32_t	version	Stores the module version (32bits)
uint32_t	version_ext	Stores the module extended version (32bits)
uint8_t	fips_mode	Stores the FIPS mode bitfield (8bits). Bitmask definition: bit0 - FIPS mode of operation: <ul style="list-style-type: none"> • value 0 - part is running in FIPS non-approved mode. • value 1 - part is running in FIPS approved mode. bit1 - FIPS certified part: <ul style="list-style-type: none"> • value 0 - part is not FIPS certified. • value 1 - part is FIPS certified. bit2-7: reserved <ul style="list-style-type: none"> • value 0.

5.7.3 Function Documentation

5.7.3.1 she_get_info()

```
she_err_t she_get_info (
    she_hdl_t session_hdl,
    op_get_info_args_t * args )
```

User can call this function only after having opened the SHE session.

Parameters

<i>session_hdl</i>	handle identifying the active session.
<i>args</i>	pointer to the structure containing the function arguments.

Returns

error code

5.8 SHE Commands

Modules

- [CMD_ENC_CBC / CMD_DEC_CBC and CMD_ENC_ECB / CMD_DEC_ECB](#)
- [CMD_EXPORT_RAM_KEY](#)
- [FAST_MAC](#)
- [CMD_GENERATE_MAC](#)
- [CMD_VERIFY_MAC](#)
- [CMD_GET_ID](#)
- [CMD_GET_STATUS](#)
- [CMD_LOAD_KEY](#)
- [CMD_LOAD_PLAIN_KEY](#)
- [CMD_INIT_RNG](#)
- [CMD_RND](#)
- [CMD_EXTEND_SEED](#)
- [last rating code](#)
- [CMD_CANCEL](#)

5.8.1 Detailed Description

5.9 CMD_GET_STATUS

Data Structures

- struct [op_get_status_args_t](#)

Functions

- [she_err_t she_get_status](#) ([she_hdl_t](#) *utils_handle*, [op_get_status_args_t](#) *args)

5.9.1 Detailed Description

Return the content of status register

5.9.2 Data Structure Documentation

5.9.2.1 struct op_get_status_args_t

Structure describing the get status operation arguments

Data Fields

uint8_t	sreg	status register bits
uint8_t	pad[3]	padding bytes

5.9.3 Function Documentation

5.9.3.1 she_get_status()

```
she_err_t she_get_status (
    she_hdl_t  utils_handle,
    op_get_status_args_t * args )
```

Command to get the content of the status register

Parameters

<i>utils_handle</i>	handle identifying the utils service
<i>args</i>	pointer to the structure containing the function arguments.

Returns

error code.

5.10 Session

SHE session is the first session to be opened, all other sessions are based on it.

Data Structures

- struct [she_session_hdl_s](#)
- struct [she_service_hdl_s](#)
- struct [open_session_args_t](#)

Macros

- #define [SHE_HANDLE_NONE](#) (0x0)
Handle not available.
- #define [SHE_MAX_SESSIONS](#) (8u)
Maximum sessions supported.
- #define [SHE_MAX_SERVICES](#) (32u)
Maximum services supported.
- #define [MAX_KEY_STORE_SESSIONS](#) (5u)
Maximum Key store sessions supported.
- #define [SHE_OPEN_SESSION_PRIORITY_LOW](#) (0x00U)
Low priority session, default setting on platforms that doesn't support sessions priorities.
- #define [SHE_OPEN_SESSION_PRIORITY_HIGH](#) (0x01U)
High Priority session.
- #define [SHE_OPEN_SESSION_FIPS_MODE_MASK](#) BIT(0)
Only FIPS certified operations authorized in this session.
- #define [SHE_OPEN_SESSION_EXCLUSIVE_MASK](#) BIT(1)
No other SHE session will be authorized on the same security enclave.
- #define [SHE_OPEN_SESSION_LOW_LATENCY_MASK](#) BIT(3)
Use a low latency SHE implementation.
- #define [SHE_OPEN_SESSION_NO_KEY_STORE_MASK](#) BIT(4)
No key store will be attached to this session. May provide better performances on some operation depending on the implementation. Usage of the session will be restricted to operations that doesn't involve secret keys (e.g. random generation)

Typedefs

- typedef uint32_t [she_hdl_t](#)

Functions

- struct [she_session_hdl_s](#) * [she_session_hdl_to_ptr](#) (uint32_t hdl)
- void [delete_she_session](#) (struct [she_session_hdl_s](#) *s_ptr)
- struct [she_session_hdl_s](#) * [add_she_session](#) (void)
- struct [she_service_hdl_s](#) * [she_service_hdl_to_ptr](#) (uint32_t hdl)
- void [delete_she_service](#) (struct [she_service_hdl_s](#) *s_ptr)
- struct [she_service_hdl_s](#) * [add_she_service](#) (struct [she_session_hdl_s](#) *session)
- [she_err_t](#) [she_open_session](#) ([open_session_args_t](#) *args, [she_hdl_t](#) *session_hdl)
- [she_err_t](#) [she_close_session](#) ([she_hdl_t](#) session_hdl)

5.10.1 Detailed Description

SHE session is the first session to be opened, all other sessions are based on it.

All functions and related data types required for opening a SHE session are described below.

5.10.2 Data Structure Documentation

5.10.2.1 struct she_session_hdl_s

Structure describing the session handle members

Data Fields

struct plat_os_abs_hdl *	phdl	Pointer to OS device node.
uint32_t	session_hdl	Session handle.
uint32_t	mu_type	Session MU type.
uint32_t	last_rating	last error code returned by command.

5.10.2.2 struct she_service_hdl_s

Structure describing the service handle members

Data Fields

struct she_session_hdl_s *	session	Pointer to session handle.
uint32_t	service_hdl	Service handle.

5.10.2.3 struct open_session_args_t

Structure detailing the open session operation member arguments

Data Fields

uint32_t	session_hdl	Session handle.
uint32_t	mu_type	MU type on which session will be opened.
uint8_t	session_priority	Priority of the operations performed in this session.
uint8_t	operating_mode	Options for the session to be opened (bitfield).
uint8_t	interrupt_idx	Interrupt number of the MU used to indicate data availability.
uint8_t	mu_id	index of the MU as per PLAT point of view.
uint8_t	tz	Trust Zone (secure) flag - Reflects the XRDC configuration on the MU.
uint8_t	did	DID associated with the MU in the XRDC configuration.

5.10.3 Typedef Documentation

5.10.3.1 she_hdl_t

```
typedef uint32_t she_hdl_t
```

Define the SHE handle type

5.10.4 Function Documentation

5.10.4.1 she_session_hdl_to_ptr()

```
struct she_session_hdl_s* she_session_hdl_to_ptr (
    uint32_t hdl )
```

Returns pointer to the session handle

Parameters

<i>hdl</i>	identifying the session handle.
------------	---------------------------------

Returns

pointer to the session handle.

5.10.4.2 delete_she_session()

```
void delete_she_session (
    struct she_session_hdl_s * s_ptr )
```

Delete the session

Parameters

<i>s_ptr</i>	pointer identifying the session.
--------------	----------------------------------

5.10.4.3 add_she_session()

```
struct she_session_hdl_s* add_she_session (
    void )
```

Add the session

Returns

pointer to the session.

5.10.4.4 she_service_hdl_to_ptr()

```
struct she_service_hdl_s* she_service_hdl_to_ptr (
    uint32_t hdl )
```

Returns pointer to the service handle

Parameters

<i>hdl</i>	identifying the session handle.
------------	---------------------------------

Returns

pointer to the service handle.

5.10.4.5 delete_she_service()

```
void delete_she_service (
    struct she_service_hdl_s * s_ptr )
```

Delete the service

Parameters

<i>s_ptr</i>	pointer identifying the service.
--------------	----------------------------------

5.10.4.6 add_she_service()

```
struct she_service_hdl_s* add_she_service (
    struct she_session_hdl_s * session )
```

Add the service

Returns

pointer to the service.

5.10.4.7 she_open_session()

```
she_err_t she_open_session (
    open_session_args_t * args,
    she_hdl_t * session_hdl )
```

Parameters

<i>args</i>	pointer to the structure containing the function arguments.
<i>session_hdl</i>	pointer to where the session handle must be written.

Returns

error code.

5.10.4.8 she_close_session()

```
she_err_t she_close_session (
    she_hdl_t session_hdl )
```

Terminate a previously opened session. All the services opened under this session are closed as well

Parameters

<i>session_hdl</i>	pointer to the handle identifying the session to be closed.
--------------------	---

Returns

error code.

5.11 SHE keys

Identifiers for SHE keys.

Macros

- `#define SHE_KEY_1 (0x04)`
- `#define SHE_KEY_2 (0x05)`
- `#define SHE_KEY_3 (0x06)`
- `#define SHE_KEY_4 (0x07)`
- `#define SHE_KEY_5 (0x08)`
- `#define SHE_KEY_6 (0x09)`
- `#define SHE_KEY_7 (0x0a)`
- `#define SHE_KEY_8 (0x0b)`
- `#define SHE_KEY_9 (0x0c)`
- `#define SHE_KEY_10 (0x0d)`
- `#define SHE_RAM_KEY (0x0e)`
- `#define SHE_KEY_SIZE_IN_BYTES 16u`
SHE keys are 128 bits (16 bytes) long.
- `#define M1_M3_M5_KEY_SIZE_IN_WORDS (SHE_KEY_SIZE_IN_BYTES >> 2)`
size of M1, M3 ad M5 in words.
- `#define M2_M4_KEY_SIZE_IN_WORDS (SHE_KEY_SIZE_IN_BYTES >> 1)`
size of M2 ad M4 in words.

5.11.1 Detailed Description

Identifiers for SHE keys.

Refer SHE specification for more information.

5.12 SHE+ key extension

Identifiers for the SHE key extension.

Macros

- #define `SHE_KEY_DEFAULT` (0x00)
no key extension: keys from 0 to 10 as defined in SHE specification.
- #define `SHE_KEY_N_EXT_1` (0x10)
keys 11 to 20.
- #define `SHE_KEY_N_EXT_2` (0x20)
keys 21 to 30.
- #define `SHE_KEY_N_EXT_3` (0x30)
keys 31 to 40.
- #define `SHE_KEY_N_EXT_4` (0x40)
keys 41 to 50.

5.12.1 Detailed Description

Identifiers for the SHE key extension.

There are 5 SHE key stores in i.MX95 and 1 SHE keystore in i.MX8DXL

Each key store contains:

- 1 SECRET KEY (id = 0x0)
- 1 MASTER ECU KEY (id = 0x1)
- 1 BOOT MAC KEY (id = 0x2)
- 1 BOOT MAC (id = 0x3)
- 10 KEY SLOTS (id = 0x04 to 0xD)
- 40 extra KEY SLOTS(id = keyID | key_ext,
 - keyID from 0x04 to 0xD,
 - key_ext like below picture)
- 1 RAM KEY (id = 0xE)

5.13 Key store

User must open a key store service flow in order to perform all operations on keys.

Data Structures

- struct [open_svc_key_store_args_t](#)
- struct [op_key_store_reprov_en_args_t](#)

Macros

- #define [KEY_STORE_OPEN_FLAGS_DEFAULT](#) 0x0u
default flags
- #define [KEY_STORE_OPEN_FLAGS_CREATE](#) 0x1u
Create a key store.
- #define [KEY_STORE_OPEN_FLAGS_SHE](#) 0x2u
Target key store is a SHE key store.
- #define [KEY_STORE_OPEN_FLAGS_SET_MAC_LEN](#) 0x8u
Check min mac length.
- #define [KEY_STORE_OPEN_FLAGS_SHARED](#) 0x20u
Target key store is a shared key store (applicable only for i.MX95)
- #define [KEY_STORE_OPEN_FLAGS_STRICT_OPERATION](#) 0x80u
The request is completed only when the key store has been written in the NVM and the monotonic counter has been updated. This flag is applicable for CREATE operation only.
- #define [SHE_STORAGE_MIN_MAC_BIT_LENGTH_DEFAULT](#) 32u
default MAC verification length in bits

Functions

- [she_err_t she_open_key_store_service](#) ([she_hdl_t](#) session_hdl, [open_svc_key_store_args_t](#) *args)
- [she_err_t she_close_key_store_service](#) ([she_hdl_t](#) key_store_handle)

5.13.1 Detailed Description

User must open a key store service flow in order to perform all operations on keys.

- create a new key store
- perform operations involving keys stored in the key store (ciphering, MAC generation/verification...)
- perform a key store reprovisioning using a signed message. A key store re-provisioning results in erasing all the key stores handled by the SHE.

To grant access to the key store, the caller is authenticated against the domain ID (DID) and Messaging Unit used at the keystore creation, additionally an authentication nonce can be provided.

5.13.2 Data Structure Documentation

5.13.2.1 struct open_svc_key_store_args_t

Structure specifying the open key store service member arguments

Data Fields

uint32_t	key_store_hdl	handle identifying the key store service flow
uint32_t	key_store_identifier	user defined id identifying the key store. Only one key store service can be opened on a given key_store_identifier.
uint32_t	authentication_nonce	user defined nonce used as authentication proof for accessing the key store.
uint8_t	flags	bitmap specifying the services properties.
uint16_t	max_updates_number	<p>maximum number of updates authorized for the key store.</p> <ul style="list-style-type: none"> Valid only for create operation. This parameter has the goal to limit the occupation of the monotonic counter used as anti-rollback protection. If the maximum number of updates is reached, HSM still allows key store updates but without updating the monotonic counter giving the opportunity for rollback attacks.
uint8_t	min_mac_length	<p>it corresponds to the minimum mac length (in bits) accepted to perform MAC verification operations.</p> <p>Only used upon key store creation when KEY_STORE_FLAGS_SET_MAC_LEN bit is set.</p> <p>It is effective only for MAC verification operations with the mac length expressed in bits.</p> <p>It can be used to replace the default value (32 bits).</p> <p>It impacts all MAC algorithms and all key lengths.</p> <p>It must be different from 0.</p> <p>When in FIPS approved mode values < 32 bits are not allowed.</p> <p>Only used on devices implementing SECO FW.</p>
uint8_t *	signed_message	pointer to signed_message to be sent only in case of key store re-provisioning.
uint16_t	signed_msg_size	size of the signed_message to be sent only in case of key store re-provisioning.

5.13.2.2 struct op_key_store_reprov_en_args_t

Structure describing the key store reprovisioning enable operation arguments

Data Fields

uint8_t *	signed_message	signed content payload
uint32_t	signed_msg_size	signed content payload size in bytes

5.13.3 Function Documentation

5.13.3.1 she_open_key_store_service()

```
she_err_t she_open_key_store_service (
    she_hdl_t session_hdl,
    open_svc_key_store_args_t * args )
```

Open a service flow on the specified key store.

Parameters

<i>session_hdl</i>	SHE handle identifying the current session.
<i>args</i>	pointer to the structure containing the function arguments.

Returns

error code.

5.13.3.2 she_close_key_store_service()

```
she_err_t she_close_key_store_service (
    she_hdl_t key_store_handle )
```

Terminate a previously opened key store service flow

Parameters

<i>key_store_handle</i>	handle identifying the key store service.
-------------------------	---

Returns

error code.

5.14 CMD_LOAD_KEY

Data Structures

- struct [op_key_update_args_t](#)
- struct [op_key_update_ext_args_t](#)

Macros

- #define [SHE_LOAD_KEY_EXT_FLAGS_STRICT_OPERATION](#) BIT(7)
User can use this flag to perform multiple updates before writing the key store into the NVM and incrementing the monotonic counter.

Functions

- [she_err_t she_key_update](#) ([she_hdl_t](#) utils_handle, [op_key_update_args_t](#) *args)
- [she_err_t she_key_update_ext](#) ([she_hdl_t](#) utils_handle, [op_key_update_ext_args_t](#) *args)

5.14.1 Detailed Description

Supports two variations of KEY update.

5.14.2 Data Structure Documentation

5.14.2.1 struct op_key_update_args_t

Structure describing the key update operation arguments

Data Fields

uint32_t	utils_handle	Handle to utils service.
uint32_t	key_ext	identifier of the key extension to be used for the operation
uint32_t	key_id	identifier of the key to be used for the operation
uint8_t *	m1	pointer to M1 message
uint8_t	m1_size	size of M1 message - 128 bits
uint8_t *	m2	pointer to M2 message
uint8_t	m2_size	size of M2 message - 256 bits
uint8_t *	m3	pointer to M3 message
uint8_t	m3_size	size of M3 message - 128 bits
uint8_t *	m4	pointer to the output address for M4 message
uint8_t	m4_size	size of M4 message - 256 bits
uint8_t *	m5	pointer to the output address for M5 message
uint8_t	m5_size	size of M5 message - 128 bits

5.14.2.2 struct op_key_update_ext_args_t

Structure describing the key update extension operation arguments

Data Fields

uint32_t	utils_handle	Handle to utils service.
uint32_t	key_ext	identifier of the key extension to be used for the operation
uint32_t	key_id	identifier of the key to be used for the operation
uint8_t *	m1	pointer to M1 message
uint8_t	m1_size	size of M1 message - 128 bits
uint8_t *	m2	pointer to M2 message
uint8_t	m2_size	size of M2 message - 256 bits
uint8_t *	m3	pointer to M3 message
uint8_t	m3_size	size of M3 message - 128 bits
uint8_t *	m4	pointer to the output address for M4 message
uint8_t	m4_size	size of M4 message - 256 bits
uint8_t *	m5	pointer to the output address for M5 message
uint8_t	m5_size	size of M5 message - 128 bits
uint8_t	flags	bitmap specifying the operations property

5.14.3 Function Documentation

5.14.3.1 she_key_update()

```
she_err_t she_key_update (
    she_hdl_t utils_handle,
    op_key_update_args_t * args )
```

Update an internal key of SHE based on memory update protocol refer specification for more information. The request is completed only when the new key has been written in the NVM. The monotonic counter is incremented for each successful update.

Parameters

<i>utils_handle</i>	handle identifying the utils service.
<i>args</i>	pointer to the structure containing the function arguments.

Returns

error code

5.14.3.2 she_key_update_ext()

```
she_err_t she_key_update_ext (
    she_hdl_t utils_handle,
    op_key_update_ext_args_t * args )
```

This is an extension of the CMD_LOAD_KEY. The functionality of the CMD_LOAD_KEY is extended by adding a flag argument. The updates to the key store must be considered as effective only after an operation specifying the flag "STRICT OPERATION" is acknowledged by SHE.

The request is completed only when the key store is written in the NVM and the monotonic counter is incremented.

Parameters

<i>utils_handle</i>	handle identifying the utils service
<i>args</i>	pointer to the structure containing the function arguments.

Returns

error code

5.15 CMD_LOAD_PLAIN_KEY

Data Structures

- struct [op_load_plain_key_args_t](#)

Functions

- [she_err_t she_load_plain_key](#) ([she_hdl_t](#) *utils_handle*, [op_load_plain_key_args_t](#) *args)

5.15.1 Detailed Description

Key is handed over in plaintext. A plain key can only be loaded into the RAM_KEY slot.

5.15.2 Data Structure Documentation

5.15.2.1 struct op_load_plain_key_args_t

Structure describing the plain key load operation arguments

Data Fields

uint8_t	key[SHE_KEY_SIZE_IN_BYTES]	pointer to plain key
-------------------------	--	----------------------

5.15.3 Function Documentation

5.15.3.1 she_load_plain_key()

```
she_err_t she_load_plain_key (
    she_hdl_t  utils_handle,
    op_load_plain_key_args_t * args )
```

Load a key as plaintext to the RAM_KEY slot without encryption and verification.

Parameters

<i>utils_handle</i>	pointer to the SHE utils handle
<i>args</i>	pointer to structure containing function arguments

Returns

error code

5.16 CMD_INIT_RNG

Functions

- [she_err_t she_open_rng_service](#) ([she_hdl_t](#) session_hdl, [open_svc_rng_args_t](#) *args)
- [she_err_t she_close_rng_service](#) ([she_hdl_t](#) rng_handle)

5.16.1 Detailed Description

We need to open RNG service before generating Random numbers after every power cycle/reset.

5.16.2 Function Documentation

5.16.2.1 she_open_rng_service()

```
she_err_t she_open_rng_service (
    she_hdl_t session_hdl,
    open_svc_rng_args_t * args )
```

Initializes the seed and derives a key for the PRNG.

User can call this function only after having opened a session.

Parameters

<i>session_hdl</i>	handle identifying the current SHE session.
<i>args</i>	pointer to the structure containing the function arguments.

Returns

error code

5.16.2.2 she_close_rng_service()

```
she_err_t she_close_rng_service (
    she_hdl_t rng_handle )
```

Terminate a previously opened rng service flow

Parameters

<i>rng_handle</i>	handle identifying the RNG session.
-------------------	-------------------------------------

Returns

error code

5.17 CMD_RND

Data Structures

- struct [open_svc_rng_args_t](#)
- struct [op_get_random_args_t](#)

Macros

- #define [SHE_RND_SIZE](#) 16u
size of random data

Typedefs

- typedef uint8_t [svc_rng_flags_t](#)

Functions

- [she_err_t she_get_random](#) ([she_hdl_t](#) rng_handle, [op_get_random_args_t](#) *args)

5.17.1 Detailed Description

The random number generator has to be initialized by CMD_INIT_RNG before random numbers can be supplied.

5.17.2 Data Structure Documentation

5.17.2.1 struct open_svc_rng_args_t

Structure detailing session open operation member arguments

Data Fields

svc_rng_flags_t	flags	bitmap indicating the service flow properties
uint8_t	reserved[3]	reserved bits
uint32_t	rng_hdl	rng handle

5.17.2.2 struct op_get_random_args_t

Structure detailing the get random number operation member arguments

Data Fields

uint8_t *	output	pointer to the output area where the random number must be written
uint32_t	random_size	length in bytes of the random number to be provided.

Data Fields

svc_rng_flags_t	svc_flags	bitmap indicating the service flow properties
uint8_t	reserved[3]	reserved bits

5.17.3 Function Documentation

5.17.3.1 she_get_random()

```
she_err_t she_get_random (
    she_hdl_t rng_handle,
    op_get_random_args_t * args )
```

returns a vector of 128 random bits.

Parameters

<i>rng_handle</i>	handle identifying the RNG service
<i>args</i>	pointer to the structure containing the function arguments.

Returns

error code

5.18 CMD_EXTEND_SEED

Data Structures

- struct [op_rng_extend_seed_t](#)

Macros

- #define [SHE_ENTROPY_SIZE](#) 16u
size of entropy for SHE

Functions

- [she_err_t](#) [she_extend_seed](#) ([she_hdl_t](#) rng_handle, [op_rng_extend_seed_t](#) *args)

5.18.1 Detailed Description

The random number generator has to be initialized by CMD_INIT_RNG before the seed can be extended.

5.18.2 Data Structure Documentation

5.18.2.1 struct op_rng_extend_seed_t

Structure describing the RNG extend seed operation arguments

Data Fields

uint32_t	entropy[4]	entropy to extend seed
uint32_t	entropy_size	entropy size

5.18.3 Function Documentation

5.18.3.1 she_extend_seed()

```
she_err_t she_extend_seed (
    she_hdl_t rng_handle,
    op_rng_extend_seed_t * args )
```

extends the seed of the PRNG by compressing the former seed value and the supplied entropy into a new seed which will be used to generate the following random numbers.

Parameters

<i>rng_handle</i>	handle identifying the RNG service
<i>args</i>	pointer to the structure containing entropy vector (128bits)

Returns

error code

5.19 Shared Buffer

Shared Memory and shared buffer.

Data Structures

- struct [op_shared_buf_args_t](#)

5.19.1 Detailed Description

Shared Memory and shared buffer.

This is applicable for SECO only not valid for V2X (i.MX95)

5.19.2 Data Structure Documentation

5.19.2.1 struct op_shared_buf_args_t

Structure describing the get shared buffer operation arguments

Data Fields

uint16_t	shared_buf_offset	offset of the shared buffer in secure memory
uint16_t	shared_buf_size	size in bytes of the allocated shared buffer

5.20 Error codes

Error codes returned by SHE functions.

Macros

- #define `SAB_INVALID_MESSAGE` 0x01
Invalid/Unknown message.
- #define `SAB_INVALID_ADDRESS` 0x02
Invalid Address.
- #define `SAB_UNKNOWN_ID` 0x03
Unknown Id.
- #define `SAB_INVALID_PARAM` 0x04
MU sanity check failed / Invalid parameters.
- #define `SAB_NVM_ERROR` 0x05
NVM general error.
- #define `SAB_OUT_OF_MEMORY` 0x06
Internal memory allocation failed.
- #define `SAB_UNKNOWN_HANDLE` 0x07
Unknown handle.
- #define `SAB_UNKNOWN_KEY_STORE` 0x08
Key store with provided key store ID does not exist (load operation).
- #define `SAB_KEY_STORE_AUTH` 0x09
A key store authentication is failing.
- #define `SAB_KEY_STORAGE_ERROR` 0x0A
Key store creation/load failure.
- #define `SAB_ID_CONFLICT` 0x0B
A Key store using the same key id already exists (create operation).
- #define `SAB_RNG_NOT_STARTED` 0x0C
Internal RNG not started.
- #define `SAB_CMD_NOT_SUPPORTED` 0x0D
Functionality not supported on current service configuration.
- #define `SAB_INVALID_LIFECYCLE` 0x0E
Invalid lifecycle for requested operation.
- #define `SAB_KEY_STORE_CONFLICT` 0x0F
The key store already exists (load operation).
- #define `SAB_KEY_STORE_COUNTER` 0x10
Issue occurred while updating the key store counter.
- #define `SAB_FEATURE_NOT_SUPPORTED` 0x11
Feature is not supported.
- #define `SAB_SELF_TEST_FAILURE` 0x12
Self test execution failed.
- #define `SAB_NOT_READY` 0x13
System not ready to accept service request.
- #define `SAB_FEATURE_DISABLED` 0x14
Feature disabled.
- #define `SAB_FATAL_FAILURE` 0xFF
fatal error

Enumerations

```

• enum she_err_t {

    SHE_FATAL_FAILURE = SAB_FATAL_FAILURE }

```

5.20.1 Detailed Description

Error codes returned by SHE functions.

Details on all error codes returned by SHE APIs

5.20.2 Enumeration Type Documentation

5.20.2.1 she_err_t

```
enum she_err_t
```

Error codes returned by SHE functions.

Enumerator

SHE_NO_ERROR	Success.
SHE_INVALID_MESSAGE	Invalid/Unknown message.
SHE_INVALID_ADDRESS	Invalid Address.
SHE_UNKNOWN_ID	Unknown Id.
SHE_INVALID_PARAM	MU sanity check failed / Invalid parameters.
SHE_NVM_ERRO	NVM general error.
SHE_OUT_OF_MEMORY	Internal memory allocation failed.
SHE_UNKNOWN_HANDLE	Unknown handle.
SHE_UNKNOWN_KEY_STORE	Key store with provided key store ID does not exist (load operation).
SHE_KEY_STORE_AUTH	A key store authentication is failing.
SHE_KEY_STORAGE_ERROR	Key store creation/load failure.
SHE_ID_CONFLICT	A Key store using the same key id already exists (create operation).
SHE_RNG_NOT_STARTED	Internal RNG not started.
SHE_CMD_NOT_SUPPORTED	Functionality not supported on current service configuration.
SHE_INVALID_LIFECYCLE	Invalid lifecycle for requested operation.
SHE_KEY_STORE_CONFLICT	The key store already exists (load operation).
SHE_KEY_STORE_COUNTER	Issue occurred while updating the key store counter.
SHE_FEATURE_NOT_SUPPORTED	Feature is not supported.
SHE_SELF_TEST_FAILURE	Self test execution failed.
SHE_NOT_READY	System not ready to accept service request.
SHE_FEATURE_DISABLED	Feature disabled.
SHE_UNKNOWN_WARNING	SHE Unknown Warning.
SHE_SEQUENCE_ERROR_RATING	Invalid sequence of commands.
SHE_KEY_NOT_AVAILABLE_RATING	Key is locked.
SHE_KEY_INVALID_RATING	Key not allowed for the given operation.
SHE_KEY_EMPTY_RATING	Key has not been initialized yet.
SHE_NO_SECURE_BOOT_RATING	Conditions for a secure boot process are not met.
SHE_KEY_WRITE_PROTECTED_RATING	Memory slot for this key has been write-protected.
SHE_KEY_UPDATE_ERROR_RATING	Key update did not succeed, errors in verification of message.
SHE_RNG_SEED_RATING	The seed has not been initialized.
SHE_NO_DEBUGGING_RATING	Internal debugging is not possible.
SHE_BUSY_RATING	SHE is busy.
SHE_MEMORY_FAILURE_RATING	Memory Error.
SHE_GENERAL_ERROR	SHE General error.
SHE_LIB_ERROR	SHE library error.
SHE_FATAL_FAILURE	fatal error

5.21 Utils

The SHE utils service flow can be opened only after opening SHE key storage handle.

Data Structures

- struct [op_open_utils_args_t](#)

Functions

- [she_err_t she_open_utils](#) ([she_hdl_t](#) key_store_handle, [op_open_utils_args_t](#) *args)
- [she_err_t she_close_utils](#) ([she_hdl_t](#) utils_handle)

5.21.1 Detailed Description

The SHE utils service flow can be opened only after opening SHE key storage handle.

User must open a SHE utils service flow in order to perform all operations:

- Create a utils handle
- perform SHE key update extension
- update SHE plain key
- export SHE plain key
- get SHE identity (UID)
- get SHE status register
- perform MAC generation and verification in fast mode for a SHE session

5.21.2 Data Structure Documentation

5.21.2.1 struct [op_open_utils_args_t](#)

Structure describing the open utils service operation arguments

Data Fields

uint32_t	utils_handle	
--------------------------	------------------------------	--

5.21.3 Function Documentation

5.21.3.1 she_open_utils()

```
she_err_t she_open_utils (
    she_hdl_t key_store_handle,
    op_open_utils_args_t * args )
```

Open SHE utils service flow on the specified key store. The SHE utils service flow can be opened only after opening SHE key storage handle.

Parameters

<i>key_store_handle</i>	handle identifying the key store service.
<i>args</i>	pointer to the structure containing the function arguments.

Returns

error code.

5.21.3.2 she_close_utils()

```
she_err_t she_close_utils (
    she_hdl_t utils_handle )
```

Terminate a previously opened utils service flow

Parameters

<i>utils_handle</i>	handle identifying the utils service.
---------------------	---------------------------------------

Returns

error code.

5.22 last rating code

Functions

- uint32_t [she_get_last_rating_code](#) ([she_hdl_t](#) session_hdl)

5.22.1 Detailed Description

We can get last rating code (error) using the below described function. This information is helpful during debugging an issue

5.22.2 Function Documentation

5.22.2.1 [she_get_last_rating_code\(\)](#)

```
uint32_t she_get_last_rating_code (  
    she\_hdl\_t session_hdl )
```

Report rating code from last command

SHE API defines standard errors that should be returned by API calls. Error code reported by SECO/V2X are "translated" to these SHE error codes. This API allow user to get the error code reported by SECO/V2X for the last command before its translation to SHE error codes. This should be used for debug purpose only.

Parameters

<i>session_hdl</i>	SHE session handle
--------------------	--------------------

Returns

rating code reported by last command

5.23 CMD_CANCEL

Functions

- void `she_cmd_cancel` (void)

5.23.1 Detailed Description

To cancel any running command, we can use below described command. This is helpful if we have mistakenly send an incorrect command and want to stop the execution of that command or discard the results if command has already been executed.

5.23.2 Function Documentation

5.23.2.1 `she_cmd_cancel()`

```
void she_cmd_cancel (  
    void )
```

interrupt any given function and discard all calculations and results.

5.24 Global Info

Macros

- void [se_get_soc_info](#) (uint32_t session_hdl, uint16_t *soc_id, uint16_t *soc_rev)

5.24.1 Detailed Description

5.24.2 Function Documentation

5.24.2.1 populate_global_info()

```
void populate_global_info (
    uint32_t session_hdl )
```

Populate the Global Info structure

Parameters

<i>session_hdl</i>	identifying the session.
--------------------	--------------------------

5.24.2.2 show_global_info()

```
void show_global_info (
    void )
```

Print the Global Info of library

5.24.2.3 is_global_info_populated()

```
bool is_global_info_populated (
    void )
```

Get the status of Global Info, if populated or not.

5.24.2.4 se_get_soc_id()

```
uint16_t se_get_soc_id (
    void )
```

Get SoC ID.

5.24.2.5 se_get_soc_rev()

```
uint16_t se_get_soc_rev (
    void )
```

Get SoC Revision.

5.24.2.6 se_get_chip_lifecycle()

```
uint16_t se_get_chip_lifecycle (  
    void )
```

Get Chip-lifecycle.

5.24.2.7 se_get_fips_mode()

```
uint8_t se_get_fips_mode (  
    void )
```

Get Fips mode.

5.24.2.8 se_get_lib_newness_ver()

```
uint8_t se_get_lib_newness_ver (  
    void )
```

Get library newness version.

5.24.2.9 se_get_lib_major_ver()

```
uint8_t se_get_lib_major_ver (  
    void )
```

Get library major version.

5.24.2.10 se_get_lib_minor_ver()

```
uint8_t se_get_lib_minor_ver (  
    void )
```

Get library minor version.

5.24.2.11 se_get_nvm_newness_ver()

```
uint8_t se_get_nvm_newness_ver (  
    void )
```

Get NVM newness version.

5.24.2.12 se_get_nvm_major_ver()

```
uint8_t se_get_nvm_major_ver (  
    void )
```

Get NVM major version.

5.24.2.13 se_get_nvm_minor_ver()

```
uint8_t se_get_nvm_minor_ver (
    void )
```

Get NVM minor version.

5.24.2.14 se_get_commit_id()

```
const char* se_get_commit_id (
    void )
```

Get Build commit id.

5.24.2.15 se_get_lib_version()

```
const char* se_get_lib_version (
    void )
```

Get library version string.

5.24.2.16 se_get_nvm_version()

```
const char* se_get_nvm_version (
    void )
```

Get NVM version string.

5.24.2.17 get_soc_id_str()

```
const char* get_soc_id_str (
    uint16_t soc_id )
```

Get the string representating SoC ID

Parameters

<i>soc_id</i>	SoC ID fetched from Global Info
---------------	---------------------------------

Returns

String representation of the SoC ID

5.24.2.18 `get_soc_rev_str()`

```
const char* get_soc_rev_str (
    uint16_t soc_rev )
```

Get the string representating SoC Revision

Parameters

<i>soc_rev</i>	SoC Revision fetched from Global Info
----------------	---------------------------------------

Returns

String representation of the SoC Revision

5.24.2.19 `get_soc_lf_str()`

```
const char* get_soc_lf_str (
    uint16_t lifecycle )
```

Get the string representation of the Chip Lifecycle

Parameters

<i>lifecycle</i>	value fetched from Global Info
------------------	--------------------------------

Returns

a string representation of Lifecycle

5.24.2.20 `se_get_info()`

```
void se_get_info (
    uint32_t session_hdl,
    op_get_info_args_t * args )
```

Get Info for Global Info setup

5.24.2.21 `se_get_soc_info()`

```
void se_get_soc_info (
    uint32_t session_hdl,
    uint16_t * soc_id,
    uint16_t * soc_rev )
```

Get SoC Info for Global Info setup
